SPEC SHEET

NEW

Pause button

Volume switch

- Improved, robust design
- Retrofittable on all models
- Improved loudness level
- Adjustable loudness level (low / high)
- Battery powered (2 AA Batteries)
- Pause button

More info

The upgraded Rotaid alarm system combines the comfort of a battery powered system with improved loudness levels. Via a volume switch, two loudness settings can be selected.

An 84dBa and an 98 dBa output (measured at 1 meter from speaker) ensures that the loudness level can be adjusted to the specific requirements of the installation.

The alarm is triggered by a coin sized magnet in the cover and needs no power socket, since it is powered by 2 AA batteries.

Via a red pause button, the alarm can be paused. Once the cabinet is closed again, the alarm will return to its operational status and the pause mode will automatically end.

With a similar set-up as the previous alarm system, the new system can be retrofitted on all Rotaid cabinet models.

The new alarm systems will be delivered on all cabinets from May 2019.
